

Recombinant Human DMD Protein (Lys3200-Thr3684), N-His tagged

Cat. No. DMD-01H Lot. No. (See product label)

SPECIFICATION

Product Overview	Purified recombinant protein of Human dystrophin (DMD), transcript variant Dp427m, Lys3200-Thr3684, with N-terminal His tag, expressed in E.coli.
Species	Human
Source	E.coli
ProteinLength	Lys3200-Thr3684
Description	This gene spans a genomic range of greater than 2 Mb and encodes a large protein containing an N-terminal actin-binding domain and multiple spectrin repeats. The encoded protein forms a component of the dystrophin-glycoprotein complex (DGC), which bridges the inner cytoskeleton and the extracellular matrix. Deletions, duplications, and point mutations at this gene locus may cause Duchenne muscular dystrophy (DMD), Becker muscular dystrophy (BMD), or cardiomyopathy. Alternative promoter usage and alternative splicing result in numerous distinct transcript variants and protein isoforms for this gene.
Molecular Mass	55.0 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Notes	For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.
