

Active Recombinant Human BRD4 (BD2) Protein (342-460), N-His tagged

Cat. No. BRD4-38H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Active Recombinant human BRD4 (BD2) (342-460) was expressed in E. coli cells using an N-terminal His tag.
Species	Human
Source	E.coli
ProteinLength	342-460
Description	Bromodomain-containing protein 4 (BRD4) is a member of the bromodomain and extra-terminal domain (BET) protein family. BRD4 contains two tandem bromodomains: BD1 and BD2. BRD4 (BD2) interacts with acetylated histones and other transcription factors, influencing the assembly and stability of large transcriptional complexes at specific genomic loci. It serves as a scaffold for the recruitment of various coregulatory proteins, contributing to the activation or repression of target genes. BRD4 (BD2) plays a critical role in cell cycle progression, as well as the maintenance of pluripotency and self-renewal in embryonic stem cells.
