

Recombinant Human DNM1L Protein (Met520-Arg736), His tagged

Cat. No. DNM1L-1671H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human DRP1 (Met520-Arg736) fused with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	Met520-Arg736
Description	Functions in mitochondrial and peroxisomal division. Mediates membrane fission through oligomerization into membrane-associated tubular structures that wrap around the scission site to constrict and sever the mitochondrial membrane through a GTP hydrolysis-dependent mechanism. The specific recruitment at scission sites is mediated by membrane receptors like MFF, MIEF1 and MIEF2 for mitochondrial membranes. While the recruitment by the membrane receptors is GTP-dependent, the following hydrolysis of GTP induces the dissociation from the receptors and allows DNM1L filaments to curl into closed rings that are probably sufficient to sever a double membrane. Through its function in mitochondrial division, ensures the survival of at least some types of postmitotic neurons, including Purkinje cells, by suppressing oxidative damage. Required for normal brain development, including that of cerebellum. Facilitates developmentally regulated apoptosis during neural tube formation.
