

Cynomolgus monkey Colon ascending Lysate

Cat. No. Colon ascending-78C **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species Cynomolgus

Source Cynomolgus Colon Ascending

Concentration 2 mg/mL or better

Tissue Type Colon ascending

Shipping Dry ice

Preparation method

Monkey (Cynomolgus) ascending colon tissue lysate was prepared by homogenization using a proprietary technique. The tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The monkey (Cynomolgus) ascending colon tissue total protein is provided in a buffer including HEPES (pH 7.9), MgCl₂, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the ascending colon tissue pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The ascending colon tissue is then Western analyzed by either GAPDH or β -actin antibody, and the expression level is consistent with each lot.

Diagnosis Normal

Storage Buffer	HEPES pH 7.9, MgCl ₂ , KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.
Storage Instruction	Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.
Applications	Ascending colon lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
