

Active Recombinant Human IL5RA Protein

Cat. No. IL5RA-1646H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Active Recombinant Human IL5RA Protein (Asp21-Glu335) without tag was expressed in Spodoptera frugiperda, Sf 21 (baculovirus).
Species	Human
Source	Insect Cells
ProteinLength	21-335 aa
Description	The protein encoded by this gene is an interleukin 5 specific subunit of a heterodimeric cytokine receptor. The receptor is comprised of a ligand specific alpha subunit and a signal transducing beta subunit shared by the receptors for interleukin 3 (IL3), colony stimulating factor 2 (CSF2/GM-CSF), and interleukin 5 (IL5). The binding of this protein to IL5 depends on the beta subunit. The beta subunit is activated by the ligand binding, and is required for the biological activities of IL5. This protein has been found to interact with syndecan binding protein (syntenin), which is required for IL5 mediated activation of the transcription factor SOX4. Several alternatively spliced transcript variants encoding four distinct isoforms have been reported.
Molecular Mass	38 kDa
Bio-activity	Measured by its ability to inhibit IL-5-dependent proliferation of TF-1 human erythroleukemic cells. The ED50 for this effect is 0.5-2 µg/mL in the presence of 0.5 ng/mL of rhIL-5.
