

Human Fetal Gallbladder Lysate

Cat. No. Fetal Gallbladder-142H **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species	Human
Source	Fetal Human Gallbladder
Concentration	2 mg/mL or better
Tissue Type	Gallbladder
Shipping	Dry ice
Preparation method	Fetal human gallbladder tissue lysate was prepared by homogenization using a proprietary technique. The tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The fetal human gallbladder tissue total protein is provided in a buffer including HEPES (pH7.9), MgCl₂, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the gallbladder tissue pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The gallbladder tissue is then Western analyzed by either GAPDH or β-actin antibody, and the expression level is consistent with each lot.
Diagnosis	Normal
Storage Buffer	HEPES pH 7.9, MgCl ₂ , KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and

NP-40.

Storage Instruction

Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

Applications

Fetal Gallbladder lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
