Human Fetal Testis Membrane Lysate

Cat. No. Fetal Testis-171H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	
Species	Human
Source	Fetal Human Testis
Concentration	2 mg/mL or better
Tissue Type	Testis
Shipping	Dry ice
Preparation method	Human testis tissue membrane protein lysate was prepared by isolating the membrane protein from whole tissue homogenates using a proprietary technique. The human testis tissue was frozen in liquid nitrogen immediately after excision and then stored at -70?C. The membrane protein is provided in a buffer including HEPES (pH 7.9), MgCl2, KCl, EDTA, Sucrose, Glycerol, sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the isolated testis tissue membrane protein pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The isolated testis tissue membrane protein is then Western analyzed by either GAPDH or β-actin antibody to confirm there is no signal or very weak signal.
Diagnosis	Normal

Storage Buffer	HEPES pH 7.9, MgCl2, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.
Storage Instruction	Store at 2-8?C for continuous use. For extended storage, freeze working aliquots at -70?C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.
Applications	Fetal Testis membrane protein lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
