

Recombinant Full Length Human CNR2 Proteoliposome

Cat. No. CNR2-14HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human CNR2 full-length ORF (NP_001832.1) recombinant protein without tag.
Species	Human
Source	Wheat Germ
Description	The cannabinoid delta-9-tetrahydrocannabinol is the principal psychoactive ingredient of marijuana. The proteins encoded by this gene and the cannabinoid receptor 1 (brain) (CNR1) gene have the characteristics of a guanine nucleotide-binding protein (G-protein)-coupled receptor for cannabinoids. They inhibit adenylate cyclase activity in a dose-dependent, stereoselective, and pertussis toxin-sensitive manner. These proteins have been found to be involved in the cannabinoid-induced CNS effects (including alterations in mood and cognition) experienced by users of marijuana. The cannabinoid receptors are members of family 1 of the G-protein-coupled receptors.
