

Recombinant Human CSF1R Protein (Ile20-Leu514), C-6×His-tagged

Cat. No. CSF1R-076H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CSF1R Protein (Ile20-Leu514) with C-6×His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	Ile20-Leu514
Description	The protein encoded by this gene is the receptor for colony stimulating factor 1, a cytokine which controls the production, differentiation, and function of macrophages. This receptor mediates most if not all of the biological effects of this cytokine. Ligand binding activates the receptor kinase through a process of oligomerization and transphosphorylation. The encoded protein is a tyrosine kinase transmembrane receptor and member of the CSF1/PDGF receptor family of tyrosine-protein kinases. Mutations in this gene have been associated with a predisposition to myeloid malignancy. The first intron of this gene contains a transcriptionally inactive ribosomal protein L7 processed pseudogene oriented in the opposite direction. Alternative splicing results in multiple transcript variants. Expression of a splice variant from an LTR promoter has been found in Hodgkin lymphoma (HL), HL cell lines and anaplastic large cell lymphoma.
