

CD15 Antibody-coupled magnetic MicroBeads

Cat. No. CD15-131M **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species Human/Mouse

Capacity for 1×10^9 total cells

Background

In the murine system, SSEA-1 is one of the key embryonic stem (ES) cell markers associated with the state of pluripotency. It is known to be expressed on undifferentiated murine ES and induced pluripotent stem (iPS) cells. In contrast, SSEA-1 is not expressed on undifferentiated human ES cells but becomes upregulated during spontaneous differentiation.
