

Recombinant Human PCSK9 Protein (Gln31-Gln152, Ser153-Gln692), C-AVI tagged, Biotinylated

Cat. No. PCSK9-3808H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Biotinylated recombinant human PCSK9 (Gln31-Gln152, Ser153-Gln692) fused with the C-terminal AVI tag was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
ProteinLength	Gln31-Gln152, Ser153-Gln692
Description	This gene encodes a member of the subtilisin-like proprotein convertase family, which includes proteases that process protein and peptide precursors trafficking through regulated or constitutive branches of the secretory pathway. The encoded protein undergoes an autocatalytic processing event with its prosegment in the ER and is constitutively secreted as an inactive protease into the extracellular matrix and trans-Golgi network. It is expressed in liver, intestine and kidney tissues and escorts specific receptors for lysosomal degradation. It plays a role in cholesterol and fatty acid metabolism. Mutations in this gene have been associated with autosomal dominant familial hypercholesterolemia. Alternative splicing results in multiple transcript variants.
Form	Lyophilized powder/frozen liquid
Molecular Mass	72.82 kDa
