

Active Protein G-coupled magnetic Beads

Cat. No. Protein G-765M **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Appearance	lyophilized powder mixture
Particle size	2.8µm
Bio-activity	Immobilized 0.04 µg /Test of Biotinylated Human PD-1, Avitag,His Tag (recommended for biopanning) to the Streptavidin-Acridine ester (0.008 µg /Test), incubated with 100 µL/Test of Human PD-L1, Fc Tag at increasing concentration coupled to Protein G-coupled Magnetic Beads (used for MPCLIA) (10 µg beads/Test). Detection was performed with sensitivity of 3.9 ng/mL in Magnetism particulate chemiluminescence immunoassay (MPCLIA) (KEYSMILE, SMART 6500S).
Coupled amount of protein	About 400 pmol (9 µg) Protein G/mg Beads
Capacity	5-10ug antibody or Human IgG Fc tag proteins/mg beads
Background	The Protein G-coupled Magnetic Beads are 2.8 µm superparamagnetic particles covalently coupled to a highly pure form of protein G. The beads can be used to capture the antibodies in Chemiluminescence procedures. The Protein G binds the heavy chain within the Fc region of most immunoglobulins but not bind dog immunoglobulins. The Protein G-coupled Magnetic Beads is easy to capture the most antibodies, and the bounded antibody have no activity lost, this ready to use products could greatly save your protein coupling time and hassle, and help us get the best

performance and highly reproducible results.

Application

The Protein G-coupled Magnetic Beads is used to capture the most antibodies, it can combination with Acridinium ester markers in chemiluminescence technology, The Acridinium ester markers such as Streptavidin-Acridinium ester can capture the biotinylated proteins or molecules, this allows detection of antigen and antibody binding or antibody screening.

Storage

Upon receipt, please store the Beads at -20°C. The shelf life is 1 year at -20 °C.
