

Recombinant Human PRKAB2 Protein (Lys17-Lys260), His tagged

Cat. No. PRKAB2-5985H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PRKAB2 (Lys17-Lys260) fused with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	Lys17-Lys260
Description	Non-catalytic subunit of AMP-activated protein kinase (AMPK), an energy sensor protein kinase that plays a key role in regulating cellular energy metabolism. In response to reduction of intracellular ATP levels, AMPK activates energy-producing pathways and inhibits energy-consuming processes: inhibits protein, carbohydrate and lipid biosynthesis, as well as cell growth and proliferation. AMPK acts via direct phosphorylation of metabolic enzymes, and by longer-term effects via phosphorylation of transcription regulators. Also acts as a regulator of cellular polarity by remodeling the actin cytoskeleton; probably by indirectly activating myosin. Beta non-catalytic subunit acts as a scaffold on which the AMPK complex assembles, via its C-terminus that bridges alpha (PRKAA1 or PRKAA2) and gamma subunits (PRKAG1, PRKAG2 or PRKAG3).
