

Recombinant Human PSMC2 Protein (Met1-Asn433), His tagged

Cat. No. PSMC2-6040H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PSMC2 (Met1-Asn433) fused with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	Met1-Asn433
Description	Component of the 26S proteasome, a multiprotein complex involved in the ATP-dependent degradation of ubiquitinated proteins. This complex plays a key role in the maintenance of protein homeostasis by removing misfolded or damaged proteins, which could impair cellular functions, and by removing proteins whose functions are no longer required. Therefore, the proteasome participates in numerous cellular processes, including cell cycle progression, apoptosis, or DNA damage repair. PSMC2 belongs to the heterohexameric ring of AAA (ATPases associated with diverse cellular activities) proteins that unfolds ubiquitinated target proteins that are concurrently translocated into a proteolytic chamber and degraded into peptides.
Form	Lyophilized powder/frozen liquid
Molecular Mass	46.87 kDa
Purity	> 90 % as determined by SDS-PAGE
