

Recombinant Human PVR Protein (Trp21-Asn343), His tagged

Cat. No. PVR-6120H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human PVR (Trp21-Asn343) fused with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	Trp21-Asn343
Description	Mediates NK cell adhesion and triggers NK cell effector functions. Binds two different NK cell receptors: CD96 and CD226. These interactions accumulates at the cell-cell contact site, leading to the formation of a mature immunological synapse between NK cell and target cell. This may trigger adhesion and secretion of lytic granules and IFN-gamma and activate cytotoxicity of activated NK cells. May also promote NK cell-target cell modular exchange, and PVR transfer to the NK cell. This transfer is more important in some tumor cells expressing a lot of PVR, and may trigger fratricide NK cell activation, providing tumors with a mechanism of immunoevasion. Plays a role in mediating tumor cell invasion and migration.
