

Recombinant Human CRTC2 Protein, GST tagged

Cat. No. CRTC2-01C **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CRTC2 Protein with GST tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	This gene encodes a member of the transducers of regulated cAMP response element-binding protein activity family of transcription coactivators. These proteins promote the transcription of genes targeted by the cAMP response element-binding protein, and therefore play an important role in many cellular processes. Under basal conditions the encoded protein is phosphorylated by AMP-activated protein kinase or the salt-inducible kinases and is sequestered in the cytoplasm. Upon activation by elevated cAMP or calcium, the encoded protein translocates to the nucleus and increases target gene expression. Single nucleotide polymorphisms in this gene may increase the risk of type 2 diabetes. A pseudogene of this gene is located on the long arm of chromosome 5.
