

Recombinant Human APOE Protein, His-tagged, Alexa 555 Conjugated

Cat. No. APOE-17HAF555 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human APOE protein with a His-tag was expressed in HEK293. Purified protein was labeled with Alexa Fluor 555 in vitro.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a major apoprotein of the chylomicron. It binds to a specific liver and peripheral cell receptor, and is essential for the normal catabolism of triglyceride-rich lipoprotein constituents. This gene maps to chromosome 19 in a cluster with the related apolipoprotein C1 and C2 genes. Mutations in this gene result in familial dysbetalipoproteinemia, or type III hyperlipoproteinemia (HLP III), in which increased plasma cholesterol and triglycerides are the consequence of impaired clearance of chylomicron and VLDL remnants.
Conjugation/Label	Alexa 555
Form	PBS buffer
