

Recombinant Human ANGPT2 Protein, TYR19-PHE496, Tag Free, Biotinylated

Cat. No. ANGPT2-013H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human Angiopoietin-2 protein was developed from HEK293.
Species	Human
Source	HEK293
ProteinLength	TYR19-PHE496
Description	This gene belongs to the angiopoietin family of growth factors. The protein encoded by this gene is an antagonist of angiopoietin 1, and both angiopoietin 1 and angiopoietin 2 are ligands for the endothelial TEK receptor tyrosine kinase. Angiopoietin 2 is upregulated in multiple inflammatory diseases and is implicated in the direct control of inflammation-related signaling pathways. The encoded protein affects angiogenesis during embryogenesis and tumorigenesis, disrupts the vascular remodeling ability of angiopoietin 1, and may induce endothelial cell apoptosis. This gene serves a prognostic biomarker for acute respiratory distress syndrome.
