

Recombinant Mouse Gdf15 Protein, Ser189-Ala303, N-hFc tagged, Biotinylated

Cat. No. Gdf15-263M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant mouse GDF15-N-hFc protein was developed from HEK293 and has a target region of N-hFc.
Species	Mouse
Source	HEK293
ProteinLength	Ser189-Ala303
Description	This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta) superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene expression. The encoded preproprotein is proteolytically processed to generate each subunit of the disulfide-linked homodimer. The protein is expressed in a broad range of cell types, acts as a pleiotropic cytokine and is involved in the stress response program of cells after cellular injury. Increased protein levels are associated with disease states such as tissue hypoxia, inflammation, acute injury and oxidative stress. Mice lacking a functional copy of this gene exhibit progressive loss of motor neurons, and more rapid blood clot formation.
