Cat. No. KLRC1-192H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human NKG2A and CD94-N-His-Avi protein was developed from HEK293 and has a target region of N-His-Avi.
Species	Human
Source	HEK293
ProteinLength	Arg100-Leu233 (NKG2A) and Ser34-Ile179 (CD94)
Description	Natural killer (NK) cells are lymphocytes that can mediate lysis of certain tumor cells and virus-infected cells without previous activation. They can also regulate specific humoral and cell-mediated immunity. The protein encoded by this gene belongs to the killer cell lectin-like receptor family, also called NKG2 family, which is a group of transmembrane proteins preferentially expressed in NK cells. This family of proteins is characterized by the type II membrane orientation and the presence of a C-type lectin domain. This protein forms a complex with another family member, KLRD1/CD94, and has been implicated in the recognition of the MHC class I HLA-E molecules in NK cells. The genes of NKG2 family members form a killer cell lectin-like receptor gene cluster on chromosome 12. Multiple alternatively spliced transcript variants encoding distinct isoforms have been observed.
