

Recombinant Cynomolgus MSLN Protein, Asp296-Gly580, C-His tagged, Biotinylated

Cat. No. MSLN-006C **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Cynomolgus MSLN/Mesothelin-C-His protein was developed from HEK293 and has a target region of C-His.
Species	Cynomolgus
Source	HEK293
ProteinLength	Asp296-Gly580
Description	This gene encodes a preproprotein that is proteolytically processed to generate two protein products, megakaryocyte potentiating factor and mesothelin. Megakaryocyte potentiating factor functions as a cytokine that can stimulate colony formation of bone marrow megakaryocytes. Mesothelin is a glycosylphosphatidylinositol-anchored cell-surface protein that may function as a cell adhesion protein. This protein is overexpressed in epithelial mesotheliomas, ovarian cancers and in specific squamous cell carcinomas. Alternative splicing results in multiple transcript variants, at least one of which encodes an isoform that is proteolytically processed.
Conjugation/Label	Biotin
Form	Lyophilised
Endotoxin	Endotoxin level was found to be less than 0.1 ng/μg (1 EU/μg).
