

Recombinant Human DDR1, GST-tagged

Cat. No. DDR1-509H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human DDR1, (amino acids 444 – end) with N-terminal GST tag expressed in <i>Baculovirus infected Sf9 cell</i> expression system. MW= 76 kDa.
Species	Human
Source	Sf9 Cells
Protein Length	444-end a.a.
Description	Receptor tyrosine kinases (RTKs) play a key role in the communication of cells with their microenvironment. These molecules are involved in the regulation of cell growth, differentiation and metabolism. The protein encoded by this gene is a RTK that is widely expressed in normal and transformed epithelial cells and is activated by various types of collagen. This protein belongs to a subfamily of tyrosine kinase receptors with a homology region to the Dictyostelium discoideum protein discoidin I in their extracellular domain. Its autophosphorylation is achieved by all collagens so far tested (type I to type VI). In situ studies and Northern-blot analysis showed that expression of this encoded protein is restricted to epithelial cells, particularly in the kidney, lung, gastrointestinal tract, and brain. In addition, this protein is significantly over-expressed in several human tumors from breast, ovarian, esophageal, and pediatric brain. This gene is located on chromosome 6p21.3 in proximity to several HLA class I genes. Alternative splicing of this gene results in multiple transcript variants.
