

Recombinant Human TTR Protein, 21-147aa, F87M and L110M Mutation, N-Trx-His tagged

Cat. No. TTR-02H Lot. No. (See product label)

SPECIFICATION

Product Overview

Recombinant Human TTR Protein (21-147aa, F87M and L110M Mutation) with N-Trx-His tag was expressed in E. coli.

Species

Human

Source

E.coli

ProteinLength

21-147aa

Description

This gene encodes one of the three prealbumins, which include alpha-1-antitrypsin, transthyretin and orosomucoid. The encoded protein, transthyretin, is a homo-tetrameric carrier protein, which transports thyroid hormones in the plasma and cerebrospinal fluid. It is also involved in the transport of retinol (vitamin A) in the plasma by associating with retinol-binding protein. The protein may also be involved in other intracellular processes including proteolysis, nerve regeneration, autophagy and glucose homeostasis. Mutations in this gene are associated with amyloid deposition, predominantly affecting peripheral nerves or the heart, while a small percentage of the gene mutations are non-amyloidogenic. The mutations are implicated in the etiology of several diseases, including amyloidotic polyneuropathy, euthyroid hyperthyroxinaemia, amyloidotic vitreous opacities, cardiomyopathy, oculoleptomeningeal amyloidosis, meningocerebrovascular amyloidosis and carpal tunnel syndrome.
