

Recombinant Human fibroblast growth factor 2 (basic) Protein, HA tagged

Cat. No. FGF2-57H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human FGF2 Protein with HA tag was expressed in Yeast (animal free media and environment).
Species	Human
Source	Yeast
Description	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members bind heparin and possess broad mitogenic and angiogenic activities. This protein has been implicated in diverse biological processes, such as limb and nervous system development, wound healing, and tumor growth. The mRNA for this gene contains multiple polyadenylation sites, and is alternatively translated from non-AUG (CUG) and AUG initiation codons, resulting in five different isoforms with distinct properties. The CUG-initiated isoforms are localized in the nucleus and are responsible for the intracrine effect, whereas, the AUG-initiated form is mostly cytosolic and is responsible for the paracrine and autocrine effects of this FGF.
