

Recombinant Human myelin oligodendrocyte glycoprotein Protein, His tagged

Cat. No. MOG-041H Lot. No. (See product label)

SPECIFICATION

Product Overview	The sequence (Accession # CAQ10087) corresponding to the extracellular domain of human MOG along with a 6×His tag was expressed in E. coli. The recombinant human MOG (H-rMOG) was purified from urea denatured bacterial lysate using immobilized metal affinity chromatography (IMAC).
Species	Human
Source	E.coli
ProteinLength	1-125aa
Description	The product of this gene is a membrane protein expressed on the oligodendrocyte cell surface and the outermost surface of myelin sheaths. Due to this localization, it is a primary target antigen involved in immune-mediated demyelination. This protein may be involved in completion and maintenance of the myelin sheath and in cell-cell communication. Alternatively spliced transcript variants encoding different isoforms have been identified.
Tag	6×His
Form	Solution
Molecular Mass	14.2 kDa

Bio-activity	Female C57BL/6 mice (8-10 weeks old) were immunized (s.c.) with 100 µg/animal of human rMOG in complete Freund's adjuvant followed by 400 ng/mouse of pertussis toxin on day 0 and day 2 (i.p.). Mice showed EAE symptoms such as limp tail, hind limb weakness, or hind limb paralysis after induction. DA rats immunized with 50 µg/animal of human rMOG at the base of the tail (s.c.) displayed EAE symptoms as well. Please note that no other EAE induction protocols were tested including IFA/cytokine model.
Resuspension condition	Human MOG must be thoroughly mixed directly with Complete Freund's Adjuvant (CFA). Do not dilute recombinant human MOG with buffers that have pH greater than 4.5. Protein will precipitate at pH higher than 4.5.
Endotoxin	Less than 0.1 EU per 1 µg of the protein as determined by Limulus Amebocyte Lysate (LAL) quantitative kinetic assay.
Purity	≥95% by SDS-PAGE
Applications	ELISA; in vivo studies; Western Blotting
Usage	Research use
Storage	Store at -80 centigrade. Avoid repeated freeze-thaw cycles.
Concentration	1 mg/mL
Storage Buffer	25 mM sodium acetate buffer (pH=4.0)

Human rMOG on SDS-PAGE

Purified H-rMOG was loaded onto 10-20% Tris-HCl gel at 3 µg/well and resolved at 200V for 60 minutes. Protein markers and purified H-rMOG (14.2 kDa) are indicated. CL=Crude Cell Lysate, FT=Flow Through, and P=Purified H-rMOG.

An Example of EAE Data Using Human rMOG

Five female Dark Agouti (DA) rats (8 weeks old) were injected with 50 µg/animal of Human rMOG in CFA (total injection volume is 100 µL/animal) subcutaneously (s.c.)
