

Native Chikungunya Virus Lysate

Cat. No. CHI-057 **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Chikungunya virus lysate has been manufactured to provide a consistent source of Chikungunya virus antigens. This material has been produced by culturing Chikungunya virus in the Vero cell line. The Chikungunya virus lysate is supplied purified and heat inactivated. This product is suitable for use in a broad range of applications including immunoassay research and development.

Background

Chikungunya virus (CHIKV) belongs to the genus Alphavirus, a member of the Togaviridae family of viruses. Chikungunya fever is a mosquito-borne disease that was first identified in Tanzania in 1953. Since 2004 there have been extensive outbreaks in Africa and Asia. In 2013 the first cases were identified in the Caribbean, and by September 2014 more than 650,000 cases had been reported in the Americas. Chikungunya fever is a febrile illness that usually starts 2–4 days after chikungunya virus infection. Patients present with clinical symptoms that include high fever, rash, headache, vomiting, myalgia, and severe joint pain. Most cases resolve after a few days but joint pain may persist for several months in some patients (CDC). CHIKV is transmitted through the bite of infected *Aedes aegypti* and *Aedes albopictus*. These mosquitos also transmit Dengue Virus, and the clinical symptoms of infection are also similar. Differential diagnosis is therefore an important consideration in areas where other flaviviruses such as Dengue co-circulate. Currently, there are no effective licensed vaccines for the prevention of Chikungunya fever or antiviral drugs available for the treatment of the disease.

Sequence Strain

Chikungunya virus

 45-1 Ramsey Road, Shirley, NY 11967, USA

Formulation	0.6M KCl containing 0.5% Triton X-100, and then subjected to heat inactivation.
Storage	Store at -80 centigrade upon receipt. Avoid repeated freeze/thaw cycles-aliquot into appropriate size vials upon receipt.
Concentration	0.5-3.0 mg/mL
Shipping	Dry ice
Notes	This product is intended for research and manufacturing uses only. It is not a diagnostic device. The user assumes all responsibility for care, custody and control of the material, including its disposal, in accordance with all regulations.
Type	Native
ClassID 1	Infectious Disease
GENE INFORMATION	
Synonyms	Chikungunya Virus
