

Recombinant allergen Art v 3 for Artemisia vulgaris (Mugwort pollen)(Pichia pastoris)

Cat. No. IVP-015 Lot. No. (See product label)

SPECIFICATION

Product Overview	Art v 3 is a pollen allergen of artemisia (Artemisia vulgaris), and belongs to the family of non-specific lipid transfer proteins (LTPs). It has been prepared as a recombinant mature protein fused to a his-tag.
Source	P.pastoris
Molecular Mass	Determined by SDS-PAGE, the protein band is at the molecular markers of 14, 400 Da and between the molecular markers of 25, 000 and 18, 400 Da. The relative molecular mass calculated from amino acid sequence without any glycosylation is 14, 045.92 Da.
Purity	>95% in a SDS-PAGE
Incidence	Not tested. According to the bibliography, the incidence of the protein is 60%
IVD	Serodiagnosis of allergy to Mugwort pollen
Stability	The protein will remain stable for four years if stored frozen.
Observation	Proteins should be maintained frozen at high concentrations. In order to defrost the protein, maintain the aliquot at 25°C without shaking to avoid aggregation. Prior making test dilutions and after defrosting the protein, is recommended to remove possible protein aggregates by centrifuging the stock solution, avoiding alterations in the immobilization of the biomolecule to the solid surface.

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

Storage	Protein is shipped with dry ice. Upon arrival, it should be aliquoted in order to avoid repeated freezing and thawing cycles and stored at -20°C to -80°C.
Concentration	1.40mg/ml
Notes	During shipment, small olumes of product will occasionally become entrapped in the seal of the product vial. For products with volumes of 200 ul or less, we recommend gently tapping the vial on a hard surface or briefly centrifuging the vial in a tabletop centrifuge to dislodge any liquid in the containers cap. Although recombinant antigens are expressed in non-pathogenic P.pastori and bacterial integrity is destroyed during purificaton, the antigen preparation should be handled as potentially infectious.
Type	Recombinant
ClassID 1	Non-specific lipid transfer protein type 1 (LTP)
