

Recombinant Human CD4, Fc Chimera

Cat. No. CD4-3030H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human CD4 Fc Chimera (rhCD4-Fc) Lys26-Trp390 fused with Fc fragment Of human IgG1 at the C-terminal,was expressed in human HEK293 cells and purified by using conventional chromatography techniques.
Species	Human
Source	HEK293
Description	This gene encodes a membrane glycoprotein of T lymphocytes that interacts with major histocompatibility complex class II antigens and is also a receptor for the human immunodeficiency virus. This gene is expressed not only in T lymphocytes, but also in B cells, macrophages, and granulocytes. It is also expressed in specific regions of the brain. The protein functions to initiate or augment the early phase of T-cell activation, and may function as an important mediator of indirect neuronal damage in infectious and immune-mediated diseases of the central nervous system. Multiple alternatively spliced transcript variants encoding different isoforms have been identified in this gene.
Purity	>95% as determined by SDS-PAGE. All lots are greater than 90% pure.
Molecular Weight	68 kDa
Formulation	Bulk protein in a 0.22 µm filtered solution of 50 mM Tris, 100 mM Glycine, pH 7.0 and delivered as liquid formulation or lyophilized powder. Normally 5-8% trehalose and mannitol are added as protectants before lyophilization.
