

Recombinant Mayaro Virus E2 Envelope Protein, mFc-tagged

Cat. No. MAY-492 **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Mayaro Virus E2 protein is a unique product that has been developed in response to the need for high purity, properly assembled and glycosylated Mayaro virus antigens for use in the development of Mayaro virus diagnostics and in vaccine development and research / development. Mayaro Virus E2 protein is produced in human cell lines using state-of-the-art expression techniques. The protein is produced from amino-acids 328-691 of the Mayaro structural polyprotein, and incorporates a C-terminal 6x HIS tag. We also offer alternative versions with mouse or human Fc tags to offer researchers maximum flexibility in their choice of reagent.

Tag

mFc

Background

MAYV is recognised as an emerging virus with the potential to cause a major epidemic in Central and South American countries. Currently, there is no licensed prophylactic vaccine or specific treatment for MAYV fever. Prevention of MAYV is through vector control measures to reduce transmission of the virus. Given the geographical distribution of MAYV and the similarity of the symptoms of Mayaro fever to infections caused by other arboviruses such as Dengue fever, Chikungunya and Zika virus, it is considered important to be able to differentiate diagnostically between these arboviral diseases (CDC). Diagnosis of MAYV infection may be achieved by serological testing for MAYV specific IgM antibodies using enzyme immunoassays (EIA). However, cross reactivity with related viruses can reduce assay sensitivity and prevent accurate diagnosis (Figueiredo, ML).

Mayaro virus (MAYV) is a positive-sense single stranded RNA virus that belongs to the genus Alphavirus, a member of the Togaviridae family of viruses. It is a member

	of the Semliki Forest antigenic sero-complex, a serological group within the Alphavirus genus, and is closely related to Chikungunya virus (CHIKV) (Esposito, D.L.A).
Purity	Greater than 90% purity by SDS-PAGE.
Sequence Strain	Acre27(GenBank accession number KM400591.1)
Formulation	DPBS pH7.4
Freezing	Can be frozen, but avoid multiple freeze/thaw cycles.
Storage	Short Term Storage: +2 centigrade to +8 centigrade Long Term Storage: -80 centigrade
Concentration	0.27 mg/mL
Notes	This product is intended for research and manufacturing uses only. It is not a diagnostic device. The user assumes all responsibility for care, custody and control of the material, including its disposal, in accordance with all regulations.
Type	Recombinant
ClassID 1	Infectious Disease
GENE INFORMATION	
Synonyms	Mayaro Virus E2 Envelope
