

Recombinant Human proteasome 20S subunit alpha 1 Protein, His tagged

Cat. No. PSMA1-001H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human PSMA1 Protein (16-263aa) with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	16-263aa
Description	The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S core structure. The core structure is composed of 4 rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. This gene encodes a member of the peptidase T1A family, that is a 20S core alpha subunit. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
