Western Blot	 The image shows a Western blot analysis with three lanes labeled I, FT, and B. On the left, molecular weight markers are indicated in kDa: 250, 130, 100, 70, 55, 35, 25, 15, 10, and 5. The top panel is a Coomassie-stained gel, showing protein loading across all lanes. The bottom panel is a Western blot, showing a specific protein band in lane B at approximately 35 kDa, labeled as GFP. Lane I shows a band at approximately 25 kDa, and lane FT shows a band at approximately 35 kDa.
