

## mNeonGreen Magnetic CoIP Agarose kit

**Cat. No.** mNeonGreen-04A    **Lot. No.** (See product label)

### SPECIFICATION

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b>          | <p>The GFP-Trap Magnetic Agarose Kit contains GFP-Trap Magnetic Agarose, lysis, wash, and elution buffers for efficient immunoprecipitation of GFP-fusion proteins and their interacting factors.</p> <ul style="list-style-type: none"> <li>• Fast, reliable &amp; efficient one-step immunoprecipitation</li> <li>• Ready-to-use</li> <li>• No heavy &amp; light antibody chains on the SDS-PAGE</li> <li>• Stable under harsh washing conditions</li> <li>• Suitable for downstream mass spec analysis</li> </ul> |
| <b>Specificity/Target</b>        | mNeonGreen                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Binding capacity</b>          | 30 µg of recombinant mNeonGreen per 25 µL bead slurry                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Conjugate</b>                 | Magnetic agarose beads; bead size: ~40 µm (cross-linked 6 % magnetic agarose beads)                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Elution buffer</b>            | SDS sample buffer<br>0.2 M glycine pH 2.5                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Wash buffer compatibility</b> | 4 M urea, 2 M NaCl, 10 mM DTT, 2 % Nonidet P40 Substitute, 1 % Triton X-100, 0.2 % SDS                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Type</b>                      | Nanobody                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Affinity (KD)</b>             | Dissociation constant KD of 2 nM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
