

Recombinant Human fibroblast growth factor 7 Protein, Flag tagged

Cat. No. FGF7-163H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human FGF7 protein (P21781-1) (Cys 32-Thr 194) with a Flag tag at the C-terminus was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	32-194aa
Description	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This protein is a potent epithelial cell-specific growth factor, whose mitogenic activity is predominantly exhibited in keratinocytes but not in fibroblasts and endothelial cells. Studies of mouse and rat homologs of this gene implicated roles in morphogenesis of epithelium, reepithelialization of wounds, hair development and early lung organogenesis. Plays an important role in the regulation of embryonic development, cell proliferation and cell differentiation. Required for normal branching morphogenesis. Growth factor active on keratinocytes. Possible major paracrine effector of normal epithelial cell proliferation.
