

Recombinant Human CD33 molecule Protein, Tag Free

Cat. No. CD33-265H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human Siglec-3/CD33 protein (P20138-1) (Asp 18-His 259) without tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	18-259aa
Description	Sialic-acid-binding immunoglobulin-like lectin (Siglec) that plays a role in mediating cell-cell interactions and in maintaining immune cells in a resting state. Preferentially recognizes and binds alpha-2,3- and more avidly alpha-2,6-linked sialic acid-bearing glycans. Upon engagement of ligands such as C1q or sialylated glycoproteins, two immunoreceptor tyrosine-based inhibitory motifs (ITIMs) located in CD33 cytoplasmic tail are phosphorylated by Src-like kinases such as LCK. These phosphorylations provide docking sites for the recruitment and activation of protein-tyrosine phosphatases PTPN6/SHP-1 and PTPN11/SHP-2. In turn, these phosphatases regulate downstream pathways through dephosphorylation of signaling molecules. One of the repressive effect of CD33 on monocyte activation requires phosphoinositide 3-kinase/PI3K.
