

Adenovirus titre rapid test kit

Cat. No. KITF-075 **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Adenovirus is a vesicle-less linear double-stranded DNA virus that is widely distributed in nature. Adenovirus vectors are the most widely used transgenic vectors after retroviral vectors, and are now widely used in gene transfection of animal cells and gene therapy.

In adenovirus assays, adenovirus titer is very important to maintain consistency between samples and to achieve the correct expression level, so we often need to measure the viral content of the viral solution as well as the adenovirus titer. The traditional endpoint dilution test takes two weeks, which is a long period of time. This kit can quickly perform adenovirus titer measurement within 48h, and the test results are more accurate.

Storage

12 months at specified storage conditions.
