

Recombinant Full Length Human LILRA3 Protein, His&Fc tagged

Cat. No. LILRA3-12HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human LILRA3/CD85e, fused to hIgG-His-tag at C-terminus, was expressed in HEK293 cell and purified by using conventional chromatography techniques.
Species	Human
Source	HEK293
ProteinLength	1-439 aa
Description	This gene encodes a member of a family of immunoreceptors that are expressed predominantly in monocytes and B cells, and at lower levels in dendritic cells and natural killer cells. The encoded protein lacks the transmembrane region found in other members of this family. It acts as a soluble receptor for class I major histocompatibility complex (MHC) antigens. Alternatively spliced transcript variants encoding different isoforms have been found. This gene is located in a cluster of related genes on chromosome 19 and is polymorphic in human populations, with many individuals containing a deletion of this genomic region.
Tag	C-His&Fc
Form	Liquid
Molecular Mass	72.2 kDa
