

Recombinant Human LDL receptor related protein 1 Protein, His tagged

Cat. No. LRP1-001H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human LRP1 Protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	2522-2941 aa
Description	This gene encodes a member of the low-density lipoprotein receptor family of proteins. The encoded preproprotein is proteolytically processed by furin to generate 515 kDa and 85 kDa subunits that form the mature receptor (PMID: 8546712). This receptor is involved in several cellular processes, including intracellular signaling, lipid homeostasis, and clearance of apoptotic cells. In addition, the encoded protein is necessary for the alpha 2-macroglobulin-mediated clearance of secreted amyloid precursor protein and beta-amyloid, the main component of amyloid plaques found in Alzheimer patients. Expression of this gene decreases with age and has been found to be lower than controls in brain tissue from Alzheimer"s disease patients.
