

Recombinant Human lactase like Protein, His tagged

Cat. No. LCTL-001H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human LCTL Protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	23-541 aa
Description	This gene encodes a member of family 1 glycosidases. Glycosidases are enzymes that hydrolyze glycosidic bonds and are classified into families based on primary amino acid sequence. Most members of family 1 have two conserved glutamic acid residues, which are required for enzymatic activity. The mouse ortholog of this protein has been characterized and has a domain structure of an N-terminal signal peptide, glycosidase domain, transmembrane domain, and a short cytoplasmic tail. It lacks one of the conserved glutamic acid residues important for catalysis, and its function remains to be determined (PMID: 12084582). Alternative splicing results in multiple transcript variants.
