

Single Lysine Ubiquitin Panel

Cat. No. Ubiquitin-12H **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species	Human
Source	E.coli
Description	Ubiquitin is a small polypeptide that can be conjugated via its C-terminus to the primary amine groups of a lysine residue on target proteins. This covalent attachment is referred to as monoubiquitylation. Additional ubiquitin moieties can subsequently be conjugated to this initial ubiquitin, utilizing any one (of seven) lysine residue on the surface of ubiquitin. The formation of these ubiquitin chains is referred to as polyubiquitylation.
Molecular Mass	Variable
Purity	> 95% by SDS-PAGE
Applications	Characterization of proteins responsible for ubiquitin conjugation or removal Ligand binding studies with ubiquitin related proteins Characterization of linkage type for target protein profiling of E2/E3 interactions Characterization of E3 polyubiquitylation activity Tag-free recombinant ubiquitin
Solubility	> 50 mg/mL
Storage	At -80 centigrade, avoid freeze/thaw cycles.
