

Recombinant Full Length Human STING Protein, Flag tagged

Cat. No. STING-015HFL Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant protein of human transmembrane protein 173 (TMEM173) with Flag tag was expressed in HEK293.
Species	Human
Source	HEK293T
ProteinLength	1-379 aa
Description	This gene encodes a five transmembrane protein that functions as a major regulator of the innate immune response to viral and bacterial infections. The encoded protein is a pattern recognition receptor that detects cytosolic nucleic acids and transmits signals that activate type I interferon responses. The encoded protein has also been shown to play a role in apoptotic signaling by associating with type II major histocompatibility complex. Mutations in this gene are the cause of infantile-onset STING-associated vasculopathy. Alternate splicing results in multiple transcript variants.
Molecular Mass	42 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Notes	For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.
