

Recombinant Human KCNMB3 Protein, His tagged

Cat. No. KCNMB3-20H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human KCNMB3 (82-207 aa) fused to His-tag at N terminus, was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	82-207 aa
Description	MaxiK channels are large conductance, voltage and calcium-sensitive potassium channels which are fundamental to the control of smooth muscle tone and neuronal excitability. MaxiK channels can be formed by 2 subunits: the pore-forming alpha subunit and the modulatory beta subunit. The protein encoded by this gene is an auxiliary beta subunit which may partially inactivate or slightly decrease the activation time of MaxiK alpha subunit currents. Alternative splicing results in multiple transcript variants. A related pseudogene has been identified on chromosome 22.
