

Active Recombinant Full Length Human BGN Protein, His tagged

Cat. No. BGN-13HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Active Recombinant human BGN protein (38-368 aa), fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
Species	Human
Source	Insect Cells
ProteinLength	1-368 aa
Description	This gene encodes a member of the small leucine-rich proteoglycan (SLRP) family of proteins. The encoded preproprotein is proteolytically processed to generate the mature protein, which plays a role in bone growth, muscle development and regeneration, and collagen fibril assembly in multiple tissues. This protein may also regulate inflammation and innate immunity. Additionally, the encoded protein may contribute to atherosclerosis and aortic valve stenosis in human patients. This gene and the related gene decorin are thought to be the result of a gene duplication.
Form	Liquid
Bio-activity	Measured in inhibit the cell growth using 3T3-L1 mouse embryonic fibroblast adipose-like cells. The ED50 range $\leq 20 \mu\text{g/mL}$.
