

Recombinant Full Length Human WDR4 Protein, His tagged

Cat. No. WDR4-02HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human WDR4 Protein with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-412 aa
Description	This gene encodes a member of the WD repeat protein family. WD repeats are minimally conserved regions of approximately 40 amino acids typically bracketed by gly-his and trp-aspartic (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Members of this family are involved in a variety of cellular processes, including cell cycle progression, signal transduction, apoptosis, and gene regulation. This gene is excluded as a candidate for a form of nonsyndromic deafness (DFNB10), but is still a candidate for other disorders mapped to 21q22.3 as well as for the development of Down syndrome phenotypes. Alternatively spliced transcript variants have been found for this gene.
