

Recombinant Human M6PR Protein, His tagged

Cat. No. M6PR-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human M6PR Protein (27-185 aa) with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	27-185 aa
Description	This gene encodes a member of the P-type lectin family. P-type lectins play a critical role in lysosome function through the specific transport of mannose-6-phosphate-containing acid hydrolases from the Golgi complex to lysosomes. The encoded protein functions as a homodimer and requires divalent cations for ligand binding. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. A pseudogene of this gene is located on the long arm of chromosome X.

Storage	Store it under sterile conditions at -20 to -80 centigrade. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Storage Buffer	Lyophilized from PBS, pH 7.4, 5% Trehalose, 5% Mannitol
Reconstitution	It is recommended that sterile water be added to the vial to prepare a stock solution > 0.1 mg/mL.
