

Active Recombinant Human IFNL1 Protein

Cat. No. IFNL1-047H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human interleukin-29 carries a mutation of Cys171 (which does not participate in disulfide bonding) in the wild-type IL-29 protein, while retaining the disulfide bonds Cys15-Cys112 and Cys49-Cys145.
Species	Human
Source	E.coli
Description	This gene encodes a cytokine distantly related to type I interferons and the IL-10 family. This gene, interleukin 28A (IL28A), and interleukin 28B (IL28B) are three closely related cytokine genes that form a cytokine gene cluster on a chromosomal region mapped to 19q13. Expression of the cytokines encoded by the three genes can be induced by viral infection. All three cytokines have been shown to interact with a heterodimeric class II cytokine receptor that consists of interleukin 10 receptor, beta (IL10RB) and interleukin 28 receptor, alpha (IL28RA).
Form	Sterile lyophilized powder
Molecular Mass	~20.0 kDa
Bio-activity	Activity is determined by the HepG2 cytopathic-effect inhibition assay, with an ED50 of < 20 ng/mL.
Endotoxin	<1 EU/μg determined by LAL.
