| <b>Product Overview</b> | Active Recombinant Bovine IL8 protein(P79255)(23~101 aa), fused with N-terminal His tag, was expressed in HEK293.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>ProteinLength</b>    | 23-101 aa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Form</b>             | Lyophilized from sterile PBS, pH7.4, containing 0.01% SKL, 1mM DTT, 5% Trehalose and Proclin300.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Bio-activity</b>     | Interleukin 8 (IL8 or chemokine (C-X-C motif) ligand 8, CXCL8) is a chemokine produced by macrophages and other cell types such as epithelial cells, airway smooth muscle cells and endothelial cells. Thus, chemotaxis assay used 24-well microchemotaxis system was undertaken to detect the chemotactic effect of IL8 on the human T-lymphocyte leukemia cell line Jurkat. Briefly, Jurkat cells were seeded into the upper chambers (150 ul cell suspension, 10 <sup>6</sup> cells/ml in RPMI 1640 without FBS) and different concentrations of recombinant bovine IL8 diluted in serum free RPMI 1640 was added in lower chamber with a polycarbonate filter (8 um pore size) used to separate the two compartments. After incubation at 37°C with 5% CO <sub>2</sub> for 60 min, the filter was removed, then cells in low chamber were observed by inverted microscope at low magnification (×100) and the number of migrated cells were counted at high magnification (×400) randomly (five fields for each filter). shows IL8 is able to induce migration of Jurkat cells. The migrated Jurkat cells in low chamber at low magnification( $\times 100$ ) were shown. Five fields of each chamber were randomly chosen, and the migrated cells were counted at high magnification ( $\times 400$ ). The optimum chemotaxis of IL8 occurs at 0.01-0.1 ng/ml.

**Molecular Mass** 10.7kDa

**Endotoxin** <1.0EU per 1 $\mu$ g (determined by the LAL method).

**Purity** > 95% as determined by SDS-PAGE.

**Storage** Avoid repeated freeze/thaw cycles. Store at -20°C for 12 months. Aliquot and store at -80°C for 12 months.

**Reconstitution** Reconstitute in 10mM PBS (pH7.4) to a concentration of 0.1-1.0 mg/mL. Do not vortex.

**Activity**
