

Recombinant Human ALB, His-tagged

Cat. No. ALB-106H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ALB was expressed as 6*his-tagged fusion protein by E.Coli and purified by Ni-sepharose.
Species	Human
Source	E.coli
Description	Albumin is a soluble, monomeric protein which comprises about one-half of the blood serum protein. Albumin functions primarily as a carrier protein for steroids, fatty acids, and thyroid hormones and plays a role in stabilizing extracellular fluid volume. Albumin is a globular unglycosylated serum protein of molecular weight 65,000. Albumin is synthesized in the liver as preproalbumin which has an N-terminal peptide that is removed before the nascent protein is released from the rough endoplasmic reticulum. The product, proalbumin, is in turn cleaved in the Golgi vesicles to produce the secreted albumin.
Source	E. coli
Species	Human
Tag	His
AA Sequence	256-609aa
Storage	The protein is stored in PBS buffer at -20 oC. Repeated freeze-thaw cycles should be
