

Human AGL Knockdown Cell Lysate

Cat. No. AGL-028HKCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	WB-validated AGL Knockdown HeLa Cell Lysate
Species	Human
Source	HeLa
Description	This gene encodes the glycogen debrancher enzyme which is involved in glycogen degradation. This enzyme has two independent catalytic activities which occur at different sites on the protein: a 4-alpha-glucotransferase activity and a amylo-1,6-glucosidase activity. Mutations in this gene are associated with glycogen storage disease although a wide range of enzymatic and clinical variability occurs which may be due to tissue-specific alternative splicing. Alternatively spliced transcripts encoding different isoforms have been described.
Form	Cell-Tissue Lysis buffer
Molecular Mass	175 kDa
Notes	Instruction of use: This knockdown cell lysate should be paired with wild-type HeLa cell lysate for use. For Western blotting, we recommend running wild-type and knockdown lysates on the same gel, and loading each well with equal volume and equal amount of total proteins.
Storage	Store at -20 centigrade for two years.
