

Human KAT2B Knockdown Cell Lysate

Cat. No. KAT2B-357HKCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	WB-validated KAT2B Knockdown HeLa Cell Lysate
Species	Human
Source	HeLa
Description	CBP and p300 are large nuclear proteins that bind to many sequence-specific factors involved in cell growth and/or differentiation, including c-jun and the adenoviral oncoprotein E1A. The protein encoded by this gene associates with p300/CBP. It has in vitro and in vivo binding activity with CBP and p300, and competes with E1A for binding sites in p300/CBP. It has histone acetyl transferase activity with core histones and nucleosome core particles, indicating that this protein plays a direct role in transcriptional regulation.
Form	Cell-Tissue Lysis buffer
Molecular Mass	93 kDa
Notes	Instruction of use: This knockdown cell lysate should be paired with wild-type HeLa cell lysate for use. For Western blotting, we recommend running wild-type and knockdown lysates on the same gel, and loading each well with equal volume and equal amount of total proteins.
Storage	Store at -20 centigrade for two years.
