

Human UBR5 Knockdown Cell Lysate

Cat. No. UBR5-463HKCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	WB-validated UBR5 Knockdown HeLa Cell Lysate
Species	Human
Source	HeLa
Description	This gene encodes a progestin-induced protein, which belongs to the HECT (homology to E6-AP carboxyl terminus) family. The HECT family proteins function as E3 ubiquitin-protein ligases, targeting specific proteins for ubiquitin-mediated proteolysis. This gene is localized to chromosome 8q22 which is disrupted in a variety of cancers. This gene potentially has a role in regulation of cell proliferation or differentiation.
Form	Cell-Tissue Lysis buffer
Molecular Mass	309 kDa
Notes	Instruction of use: This knockdown cell lysate should be paired with wild-type HeLa cell lysate for use. For Western blotting, we recommend running wild-type and knockdown lysates on the same gel, and loading each well with equal volume and equal amount of total proteins.
Storage	Store at -20 centigrade for two years.
Concentration	Lot-specific
